Reverse Engineering?

- Taking something apart …

  … to figure out how it works
- With software…
  - Military/commercial espionage
  - Unauthorized duplication
  - Security analysis
  - Vulnerability analysis
  - Malware analysis

Reverse Engineering?

- Whenever we write something awesome…
  - Video game
  - Encryption algorithm
  - Malware
  - 0-Day
  - RAT
- … someone, at some point, is going to …
  - Capture it
  - Dissect it
  - Reverse it

Reverse Engineering?

- If you don't want your work destroyed …
  … it pays to plan ahead

Anti-RE

Anti-RE

- Encryption
- Obfuscation
- Anti-debugging

& objdump –d –Mintel a.out

Reverse Engineering.

```
4004e9:  mov    DWORD PTR [rbp-0x8],0x0
4004f2:  push   600004
4004f8:  call   printf
4004fa:  pop    eax
4004fc:  add    DWORD PTR [rbp-0x8],0x1
400500:  cmp    DWORD PTR [rbp-0x8],0x100
400507:  jle    4004f2 <main+0xb>
```

mov

- mov is Turing-complete
  - Stephen Dolan
  - http://www.cl.cam.ac.uk/~sd601/papers/mov.pdf

- mov destination, source

mov

- Any code we write …
- … can be written as a set of movs instead
- … *and nothing else*
- *Really?*
- That'd be tough to reverse engineer, wouldn't it?

Turing Complete?

```
4004e9:  mov    DWORD PTR [rbp-0x8],0x0
4004f2:  push   600004
4004f8:  call   printf
4004fa:  pop    eax
4004fc:  add    DWORD PTR [rbp-0x8],0x1
400500:  cmp    DWORD PTR [rbp-0x8],0x100
400507:  jle    4004f2 <main+0xb>
```

```
80515bc:  mov    eax,ds:0x835d81a
80515c1:  mov    ebx,DWORD PTR [eax+0x835d6fc]
80515c7:  mov    edx,DWORD PTR ds:0x835d7da
80515cd:  mov    eax,0x0
80515d2:  mov    al,BYTE PTR [ebx+edx*1]
80515d5:  mov    al,BYTE PTR [eax+0x835dc7e]
80515db:  mov    BYTE PTR [ebx+edx*1],al
80515de:  mov    eax,ds:0x835d81a
80515e3:  mov    ebx,DWORD PTR [eax+0x835d6fc]
80515e9:  mov    edx,DWORD PTR ds:0x835d7da
80515ef:  mov    eax,0x0
80515f4:  mov    al,BYTE PTR [ebx+edx*1]
```

- mov-only C Compiler
  - https://github.com/xoreaxeaxeax
- First single instruction C compiler!

The M/o/Vfuscator

- factor 20460
- prime
- decss
- Lost
- M/o/Vfuscator

The M/o/Vfuscator

- Crackmes

The M/o/Vfuscator

- How would an experienced reverse engineer approach this?

```
mov [dword 0x80a0451],edx

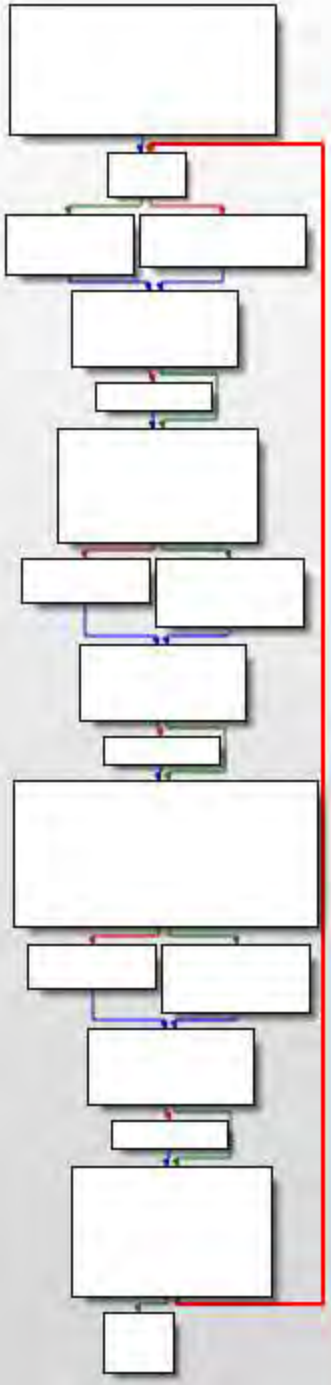
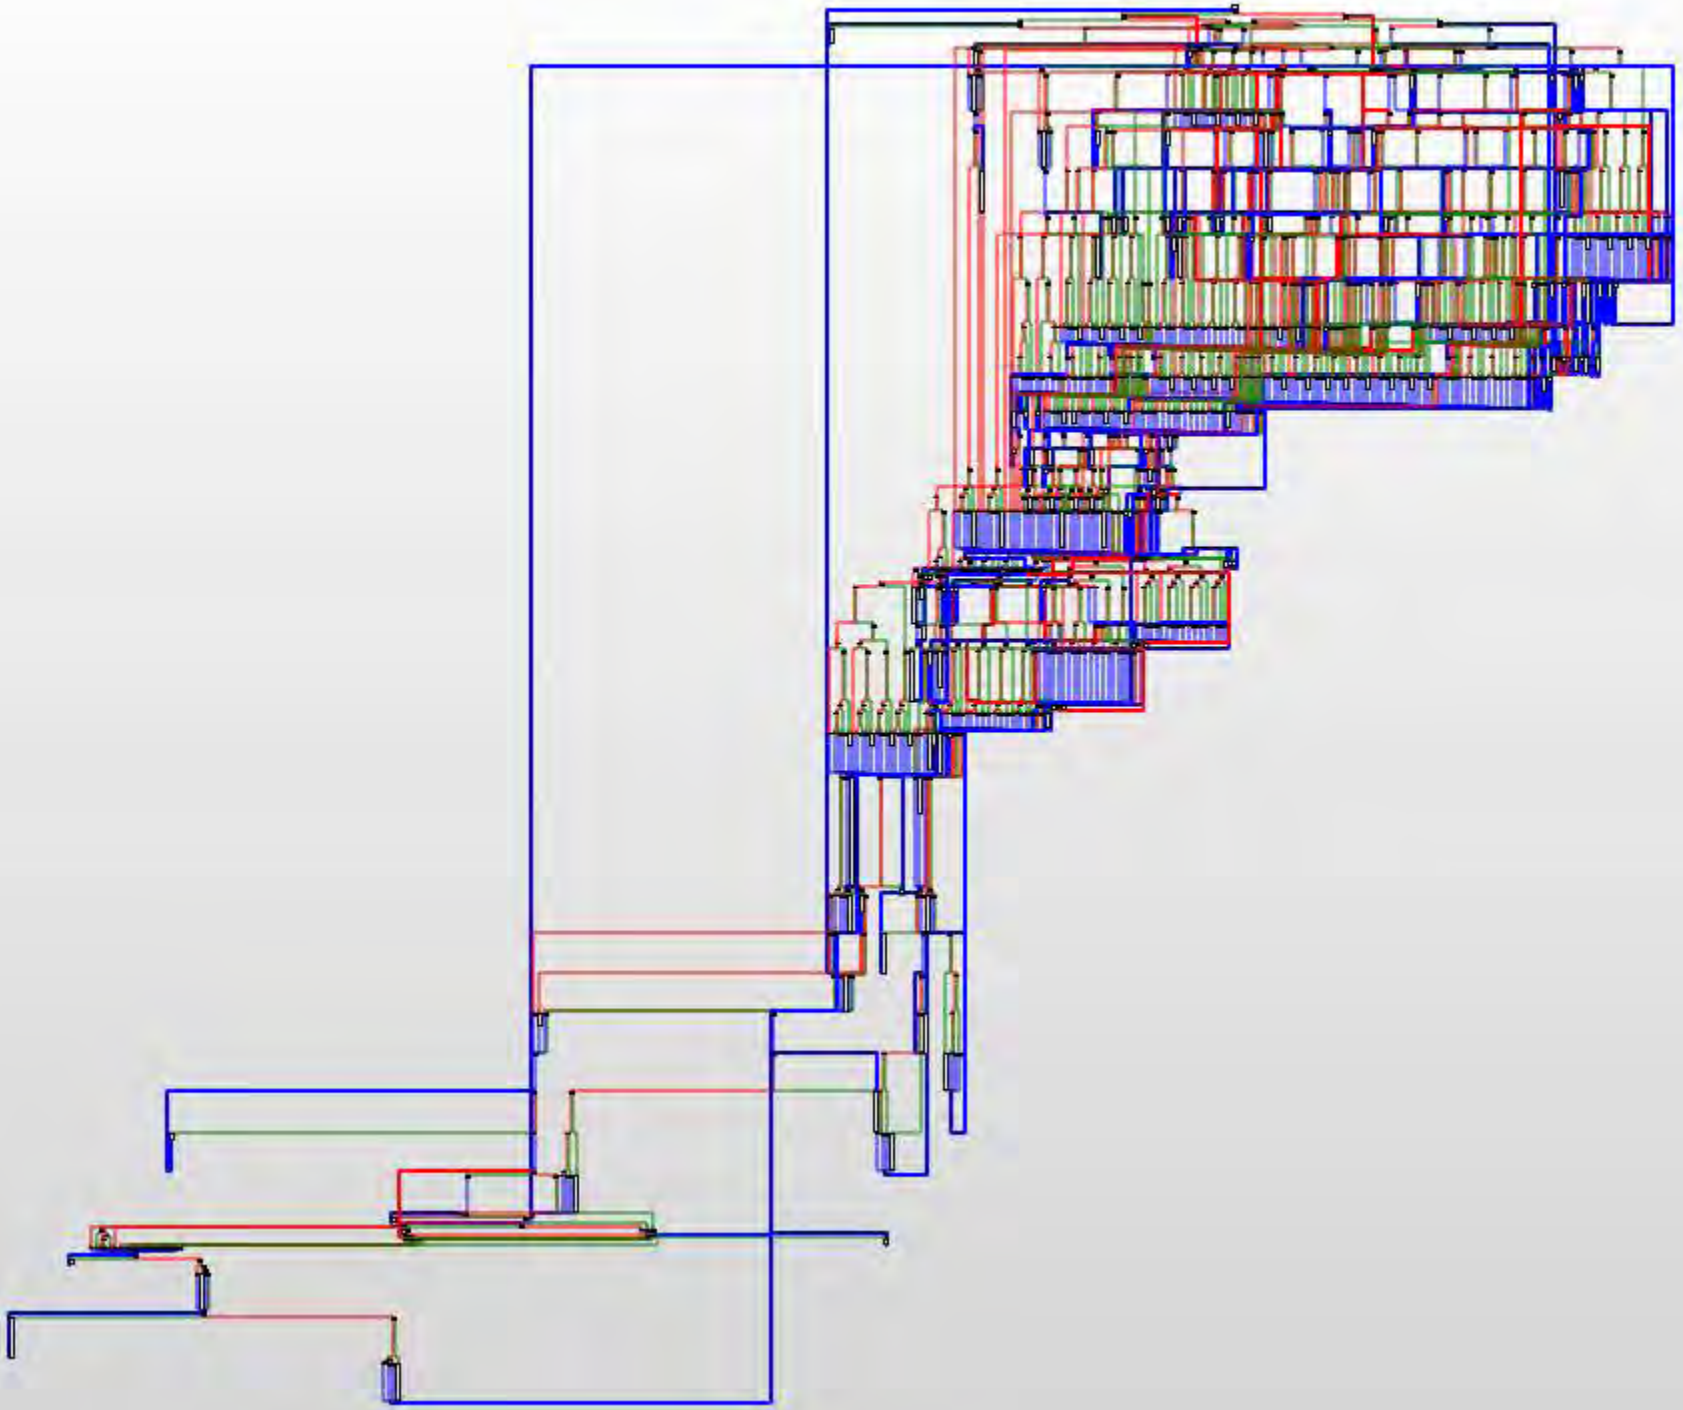
- We'll look at IDA
- But the algorithm will work on anything

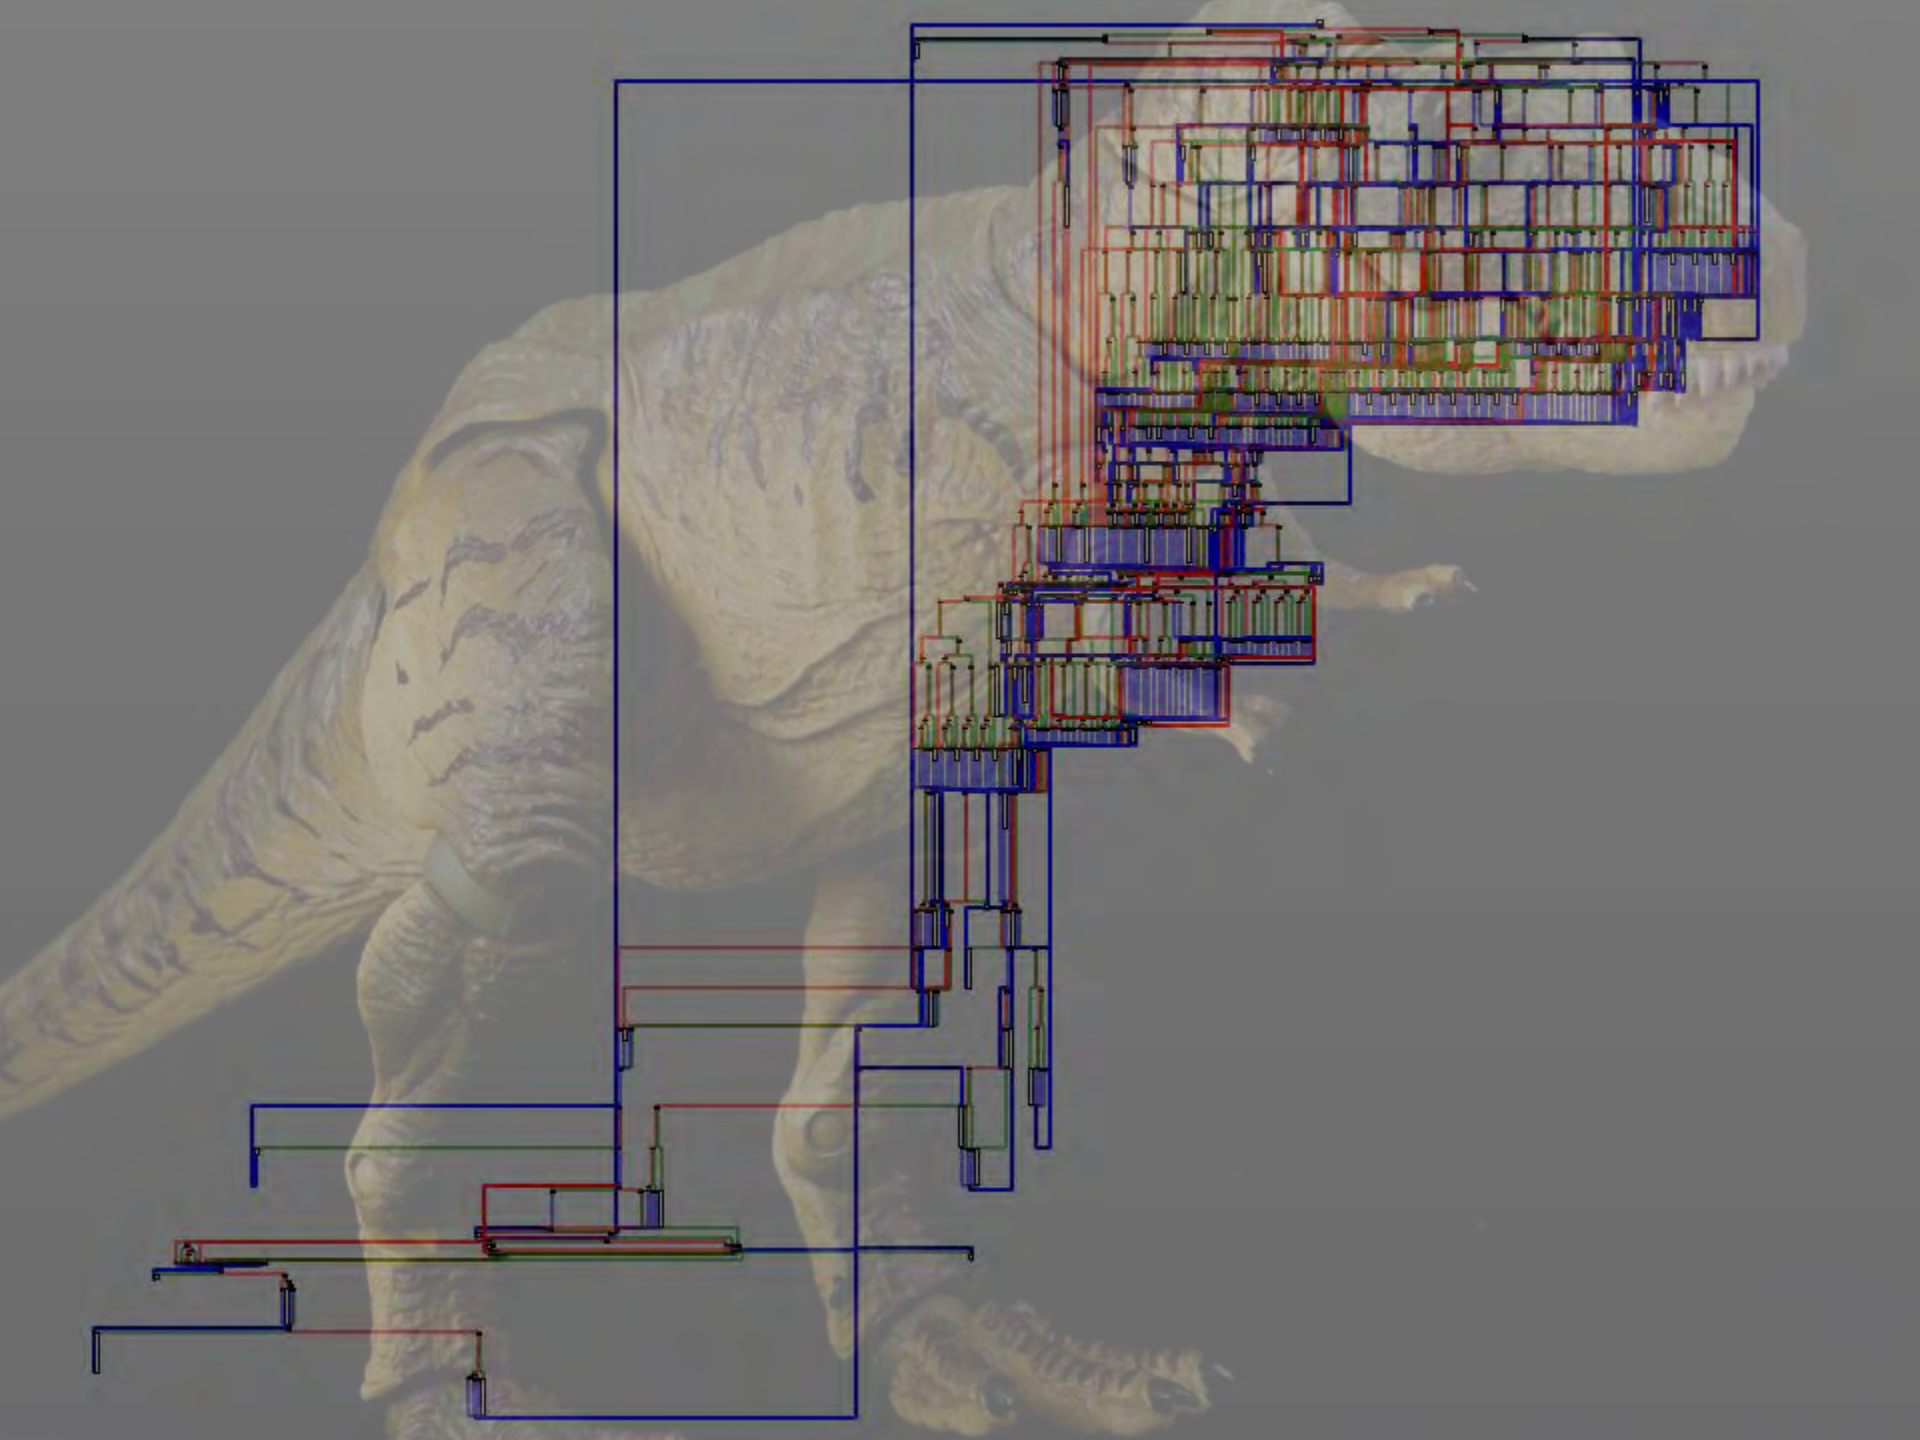
IDA

- If you stare at these control graphs long enough…
  … they almost start to look like things

Idea…





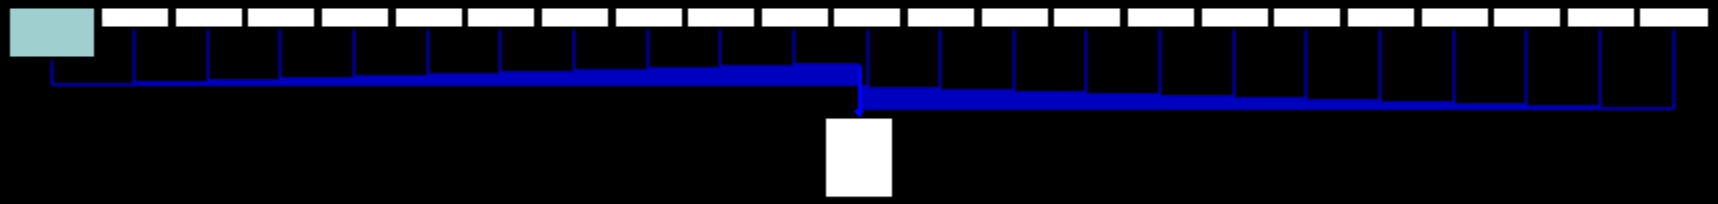


- Could we send a message through a CFG?
- Reverse engineer IDA?
  - Yep!

Drawing with CFGs

- Draw horizontal lines:
  - Switch
  - “Orphan” jumps
    - `jmp a`
    - `jmp a`
    - `jmp a`
    - `jmp a`
    - `jmp a`
    - `jmp a`
    - `a:`

Idea 1



- Draw vertical lines:
  - Non-branching code
    - nop
    - nop
    - nop
    - nop
    - nop
    - nop

Idea 1

- Combining the two
  - Etch-a-sketch, in IDA!

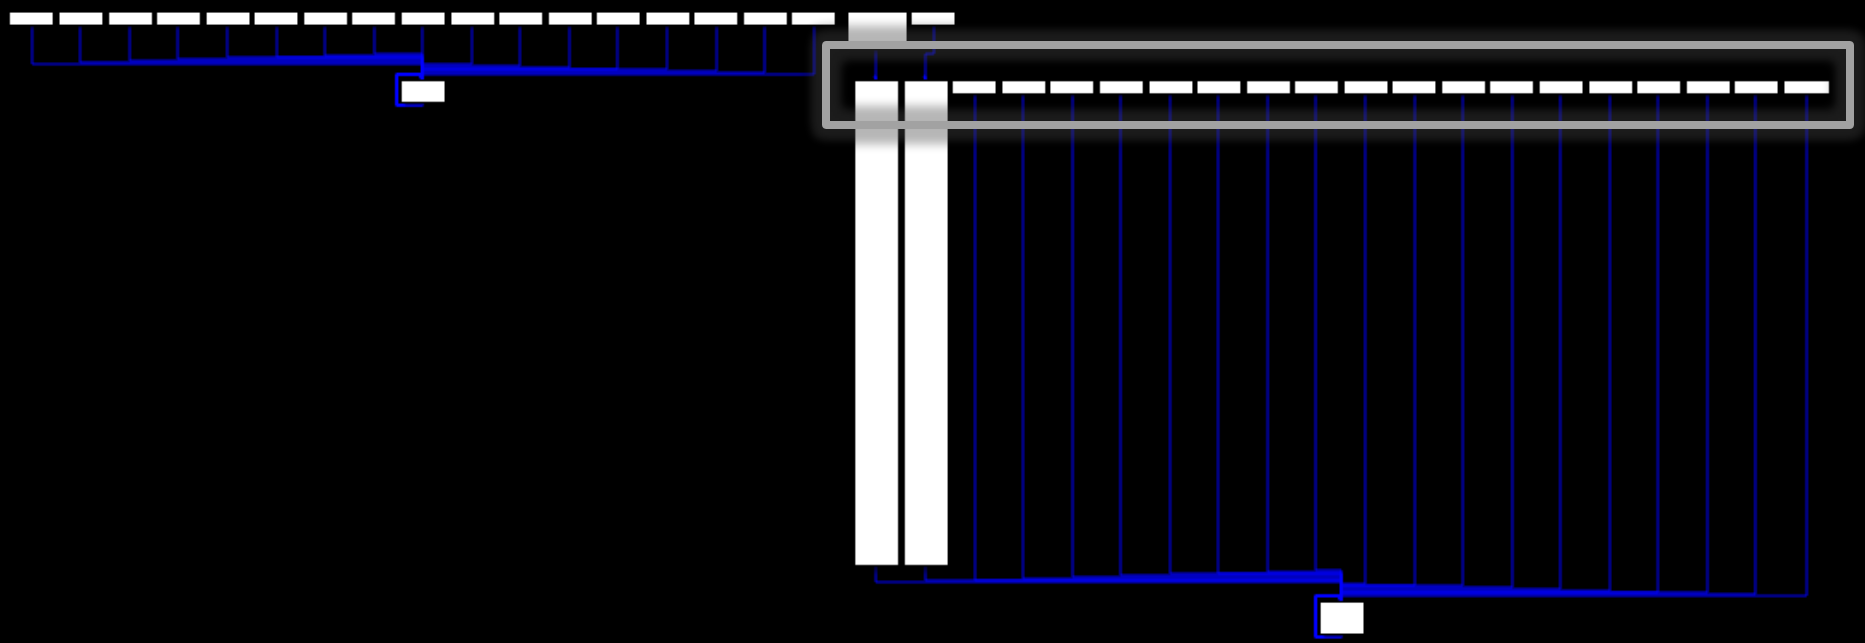
Idea 1

```
top:
jmp left
jmp top_end
… ; repeat
jmp right_side
top_end:
jmp $

left_side:
nop
… ; repeat
jmp bottom_left

right_side:
nop
… ; repeat
jmp bottom_right

bottom:
botton_left:
jmp bottom_end
… ; repeat
bottom_right:
bottom_end:
ret
```



Observation

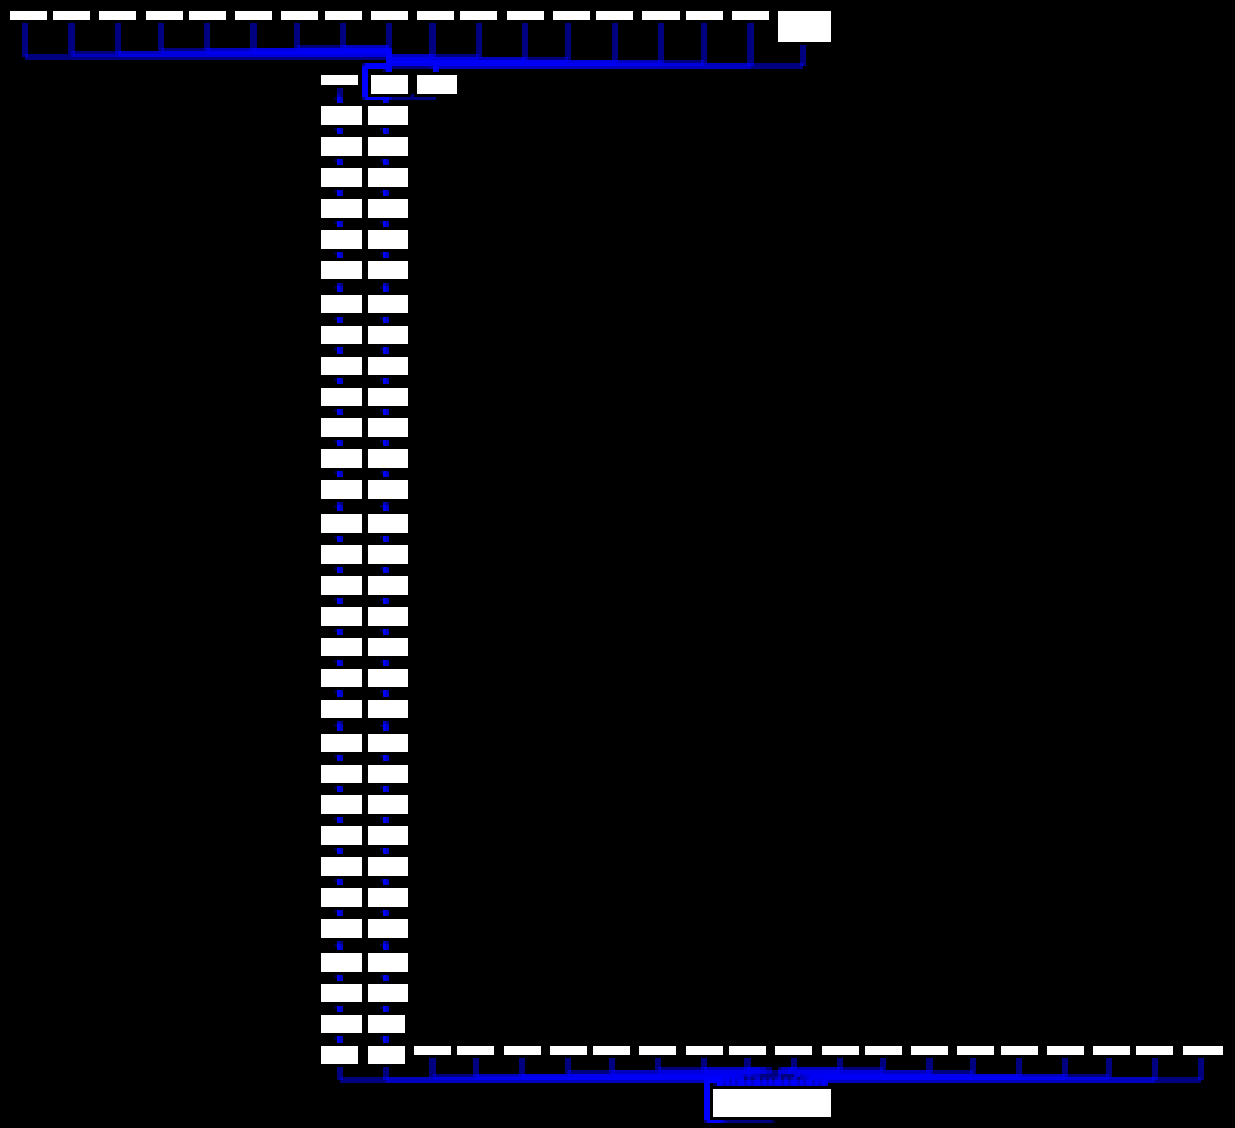
- IDA tries to align blocks in a given row

```
top:
jmp left
jmp top_end
… ; repeat
jmp right_side
top_end:
jmp $

left_side:
jmp $+2
… ; repeat
jmp bottom_left
```

```
right_side:
jmp $+2
… ; repeat
jmp bottom_right

bottom:
botton_left:
jmp bottom_end
… ; repeat
bottom_right:
bottom_end:
ret
```



Observation

- IDA tries to keep rows/columns together
  - But minimize branching distance

- Hour of tinkering
- Couldn’t make it work
- Try something else

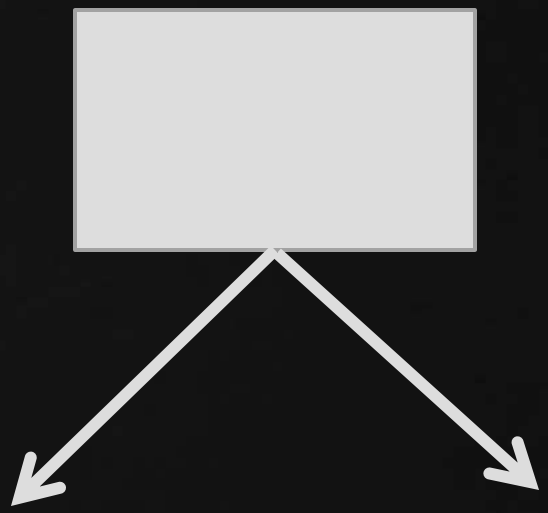
Separating the columns

- We have some control over how rows are arranged
  - Depends on nodes between
- IDA has all the control over columns
  - Can rearrange parent nodes and branches to keep columns close together

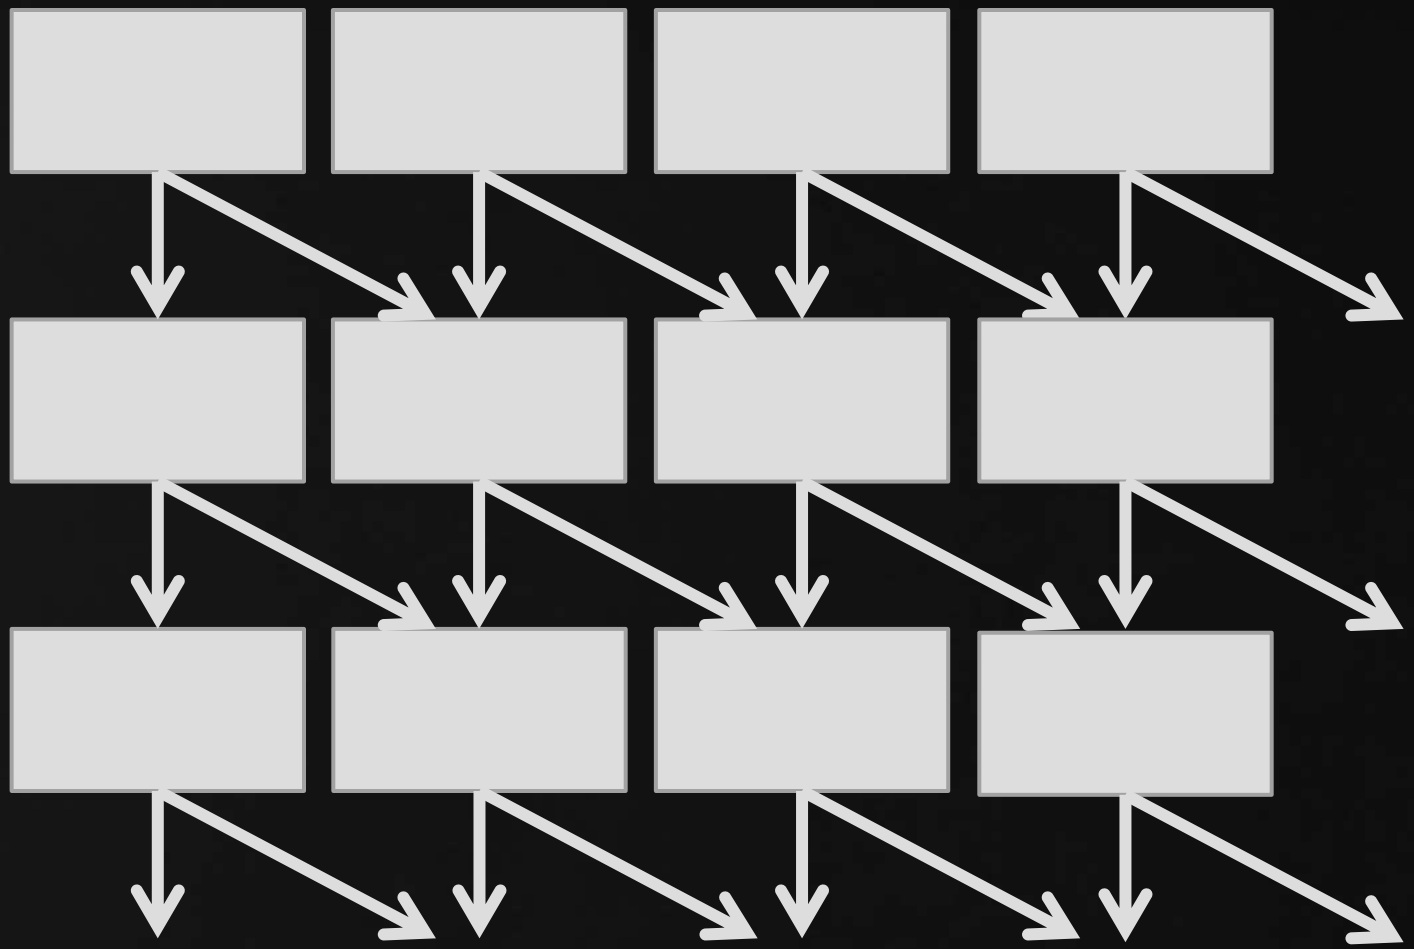
R.I.P. Idea 1

Idea 2

- *Force* IDA to keep things in order
  - Tie nodes together as tightly as possible
  - Prevent rearranging



A node



A tightly woven CFG

```
x:

a0: je b1     a1: je b2     a2: je b3     a3:
b0: je c1     b1: je c2     b2: je c3     b3:
c0: je d1     c1: je d2     c2: je d3     c3:

```

- We still can’t remove a node

R.I.P. Idea 2

Idea 3

- Leave all nodes
- Fill with code if “on”
- Leave empty if “off”

Enhance contrast

- “Empty” pixel still needs 2 lines
- Increase contrast by reducing impact of those 2
- Reduce impact by increasing height
- Increase height by increasing width
- vfmaddsub132ps xmm0, xmm1, xmmword ptr cs:[edi+esi*4+8068860h]
